choropleth map

FILTER

Demographic breakdown

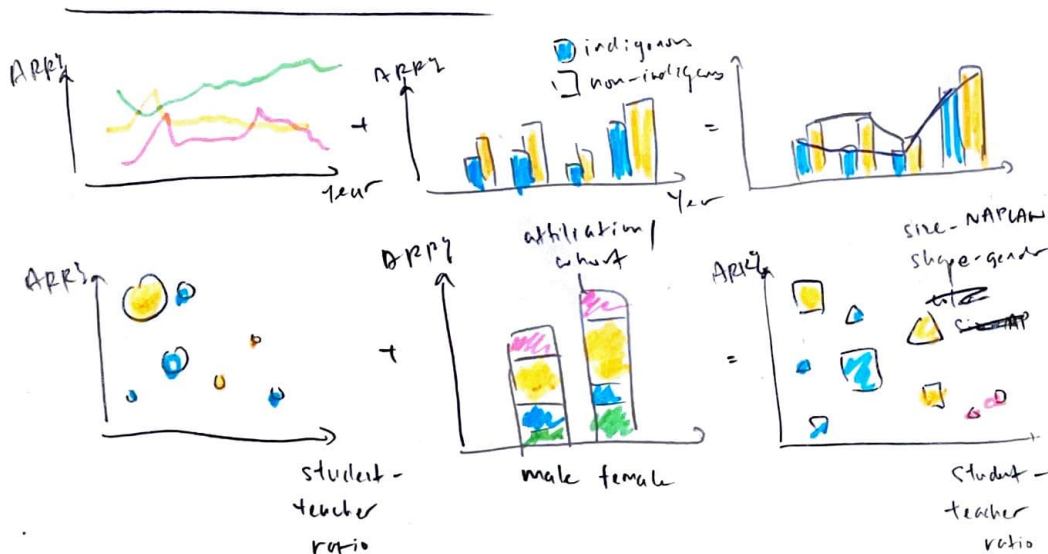

CATEGORISE

Spatial comparison
- compare ARR in different regions

Temporal trends
- Discover any patterns or dips

Demographic breakdown
- Look in depth into cohort, school sector, gender etc

COMBINE & REFINE

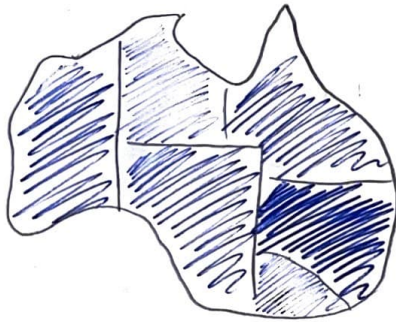

QUESTION

- What message do I want viewers to take away?
- What granularity is useful e.g. State/reg./of school level?
- How can I make comparisons fair across different factors?

time context

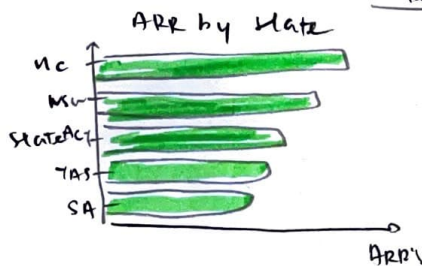

LAY OUT

School Retention Across Australia

Year: _____ Sector: Gender:

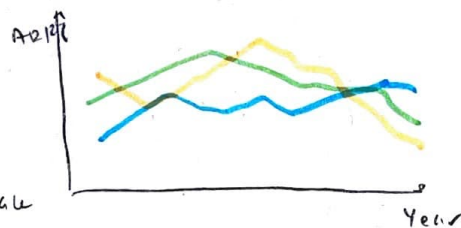

Text

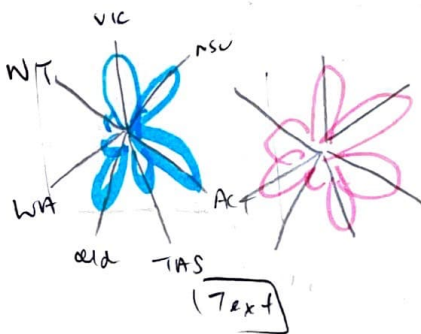

Text

Text

ARR over the years

Male
Female

Text

TITLE: National Patterns & Perspectives

AUTHOR: Jason Lim

DATE: 4/10/2025

SHEET: 2

TASK: Assignment 2

OPERATIONS

- Map filter
 - Year slider
 - School sector dropdown
 - Gender dropdown

Hover over map region

→ highlights bar chart and petal chart

Global year filter for all other charts?

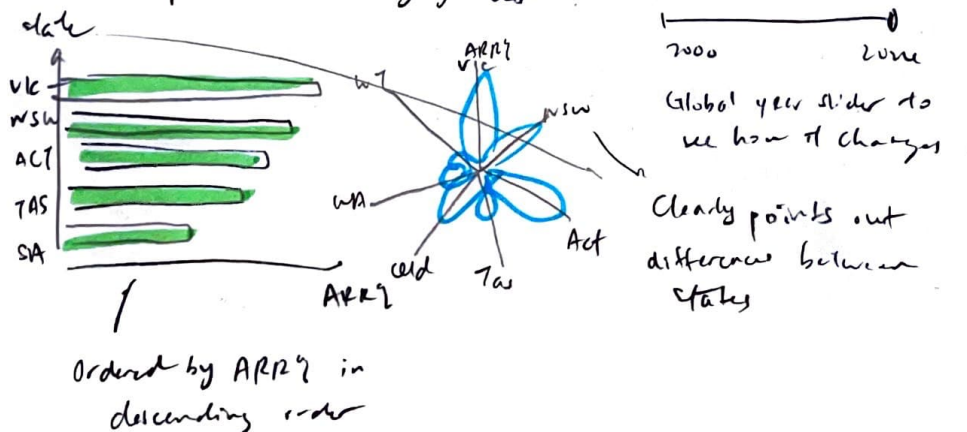

Tooltips

Map
State:
Gender:
ARR:
Year:
Sector:

Line chart
State:
Year:
ARR:

FOCUS

Focus on where and how strongly retention differs geographically and by gender

DISCUSSION

Advantages

- Instantly relatable
- Spatial & comparative

Disadvantages

- petal idiom might not be feasible
- hard to verify legibility

→ Animate line chart to reinforce time context

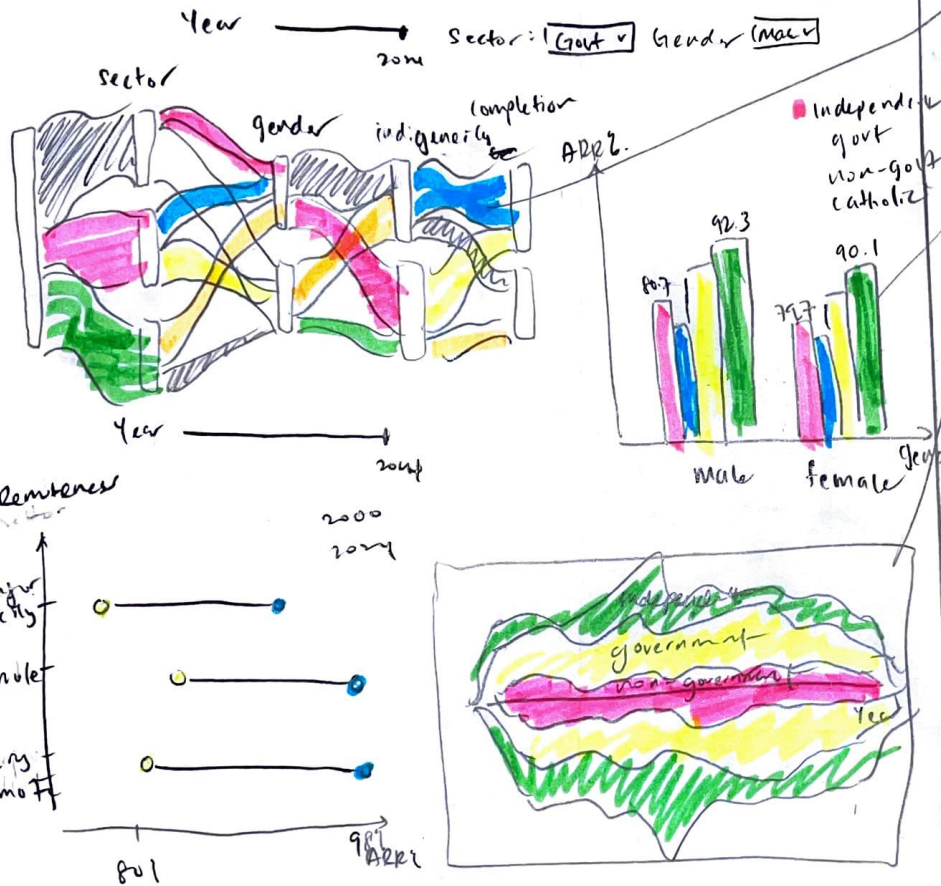

LAYOUT

Journeys through Schooling

Text

Text

TITLE: Journeys through schooling

AUTHOR: Jason Lim

DATE: 4/10/2025

SHEET: 3

TASK: Assignment 2

OPERATIONS

- Hovering over the bands in the sankey diagram highlights the entire related pathway
- Hovering on a school sector name highlights the same sectors ribbon in the streamgraph
- Filtering:
 - Year filters + dropdowns for sector and gender and cohort

Tooltips:

Sankeys

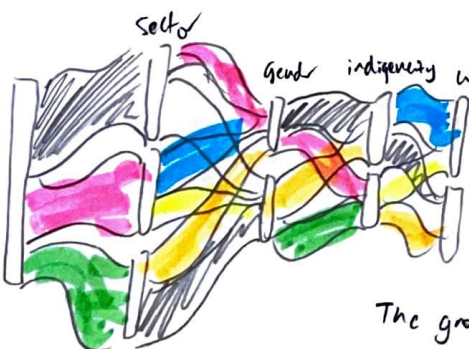

Sector → Gender
ARR
No. of students:

Streamgraph

Year:
Sector:
ARR:

Focus

Focuses on the Sankey diagram which shows the visual journey of students moving through the schooling system.

Each band flows through different attributes and tapering/widening shows how many students stay/leave.

E.g. thicker bands for independent schools may show higher retention.

The grouped bar chart and dumbbell chart quantify these differences clearly.

DISCUSSION

Advantages:

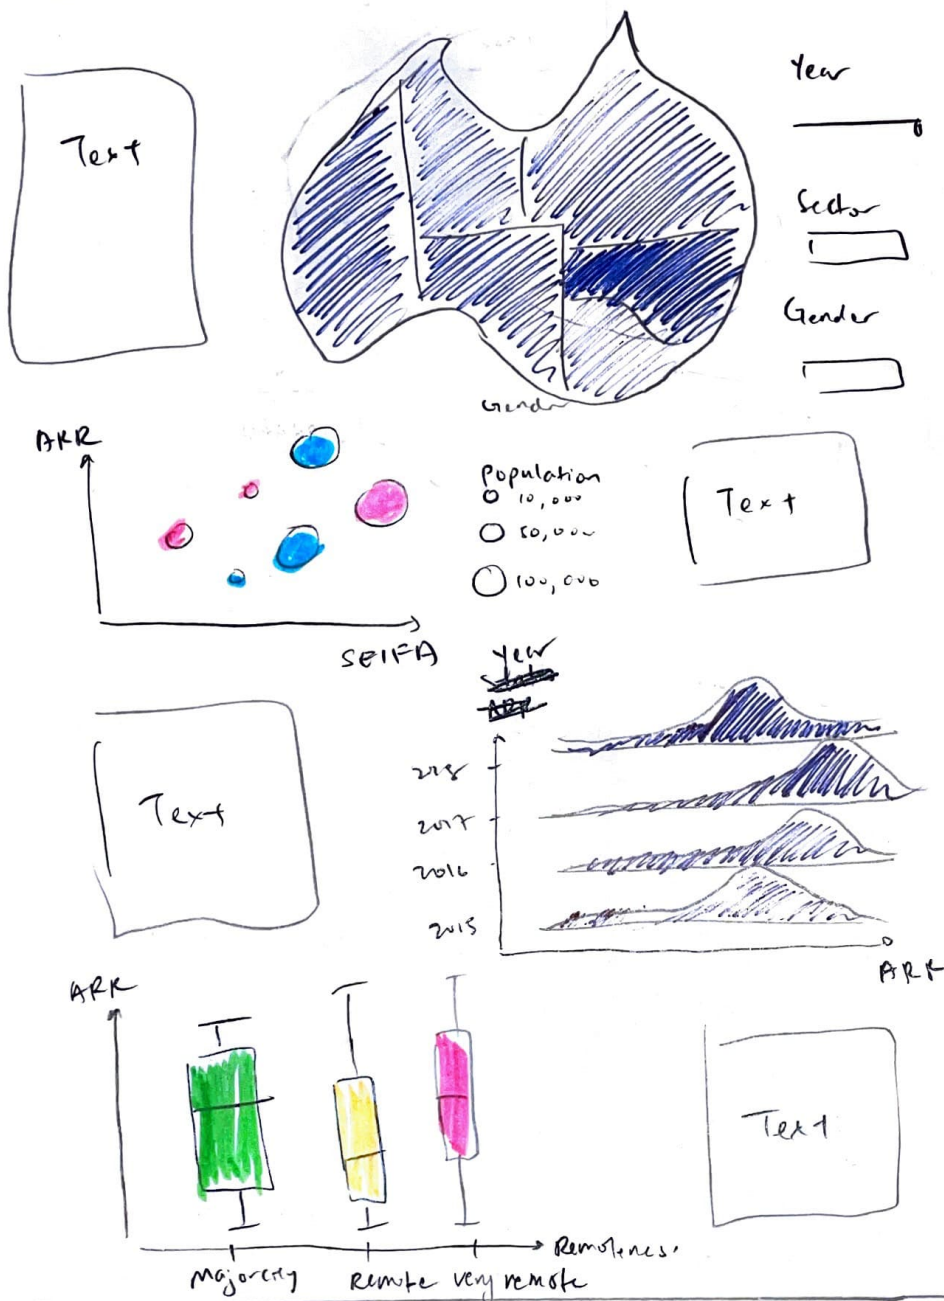

- conveys where students go and where they go to.
- graphs add time depth and simple snapshots
- balances storytelling and measurement

Disadvantages:

- Sankey can be too dense
- flow thickness exaggeration if ARR values are similar

LAYOUT

Equity on school retention

TITLE: Equity explorer

AUTHOR: Jason Lim

DATE: 4/10/2025

SHEET: 4

TASK: Assignment 2

OPERATIONS

Filters:

- Year
- Sector
- gender
- indigeneity

Hover: on the map, highlight that state's ridge and boxplot segment

Tooltips:

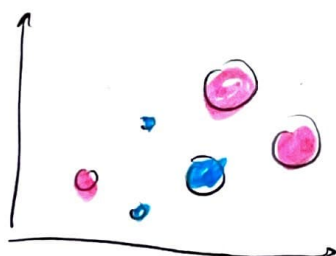

Boxplot

Data:
Sector:
ARR:
Median:

Legend interaction: click a Sector color to mute others

Focus

Focuses on uncovering whether improvements in Australia's ARR are shared fairly across regions, sectors and demographics. or if gaps persist.

the scatter plot clearly links the inequities to socioeconomic advantage and reveals structural factors

Ridgeline and boxplot reinforces this through temporal and statistical perspectives.

DISCUSSIONS

Advantages:

- multi-level exploration of equity
- consistent encoding ensures clarity
- offers narrative depth and analytical precision

Disadvantages:

- needs careful layout and color design to prevent overload
